## PostgreSQL

'Describe' a database: Description: Fully featured and powerful database design and management system. Designed to be an enterprise class database and to provide easy to use features for administrators, data architects, DBA's, developers and programmers. Powerful features: Full text search, hierarchical/nested tables, nested transactions, constraint violations, deletes, drops, references, triggers, views, updates, foreign keys. Support for multibyte character encodings: UTF8, UTF16, UTF32, GB18030, BIG5, EUC\_JP, EUC\_CN, EUC\_KR, TIS620, THAI. Support for enhanced delimiters: Backslash, Tildeslash, Plus, Minus, Caret, Tilde. Fully localizable application: All the database scripts are localized in over 30 languages. Automatic language detection: Choose your language by typing its name or by clicking on the corresponding link. Identifies your system's native language and automatically sets it as the default language. Locale aware sorting: SQL scripts are sorted correctly by the language locales on your system. Creates the required locale files for multibyte character encodings automatically if they are not present. Built-in advanced text search: Search for the defined words, boolean, and regular expressions, or for phrases. Full text search indexes: Full text search indexes for both column and row level. Bucketed indexes: Bucketed indexes for both column and row level. Hash index: Perfect hash index for associative arrays. In-line views: Main view, inline view, WHERE clause view, SELECT subquery views. Built-in security: Authentication, authorization and role based access control. Built-in replication: Automatic slave/master or stream replication. Nested transactions: Nested transactions for read-write and read-only isolation levels. Requires only user permissions to start and stop the transaction. When a transaction is started, the server takes over, thus, no one else can make any changes. Durable transactions: Transactions that remain active until explicitly ended. Endless transactions: Transactions that never end or are automatically closed after a specified duration. Clustering: Automatic cluster configuration and failover.

### What's New in the?

Version 9.0 Data type OID version 14 Installer: bootstrap Active database: postgres Database type: readwrite SQL commands: 801 Status: checked Installed: postgres Language: postgresql Language ID: 902 Language name: English # Loaded plugins: postgres\_fdw, ps\_archiver, refresh # Database: postgres #  
----- server version: 9.0.3 client version: 9.0.3 DB driver: libpq5 (Mac OSX) Using application default encoding UTF8 SSL connection established. TLSv1.2 connection established with 65472 bytes. TLS handshake successful. Server version: 9.0.3 PostgreSQL version: 9.0.4 Minimal  
server versions: 8.0 Windows version: VL#1 VL#1 Windows CLI version: 9.0.4 C library version: 9.0 libpq version: 9.0.4 Loaded plugins: postgres\_fdw, ps\_archiver, refresh >> Download/install/run PostgreSQL now \*\* is a managed PostgreSQL database server appliance with postgresql\_fdw databases provided by  
PostgreSQL B-D-S, the Dataverse and the Physionet groups, based on the CentOS Linux 7 kernel, CentOS, zypper, manjaro and coreOS. Hi, There are 3 steps to configure the PostgreSQL 9.1 server: 1. Install PostgreSQL 9.1 from the original files and extract the PostgreSQL installation package. 2. Update your  
/etc/sysconfig/postgresql file with the service parameters: #!/bin/bash # service="systemctl start postgresql" service="service start postgresql" user="postgres" pre="90" - "restart postgresql" - "reload" - "systemctl restart postgresql" - "systemctl reload postgresql" - "systemctl restart postgresql" - "systemctl reload postgresql" - "psql -U postgres -d postgres -c "select version()"
